Overview

Reflect on the following question:

- What is the octal equivalent of 0x829.A?

Overview

- This sub-module introduces how to perform base conversion between number systems
- The objectives are as follows:
 - ✓ Describe the process of converting from decimal to other number system
 - ✓ Describe the process of converting special cases involving binary, octal and hexadecimal
 - ✓ Describe the process of converting from one number system to another number system

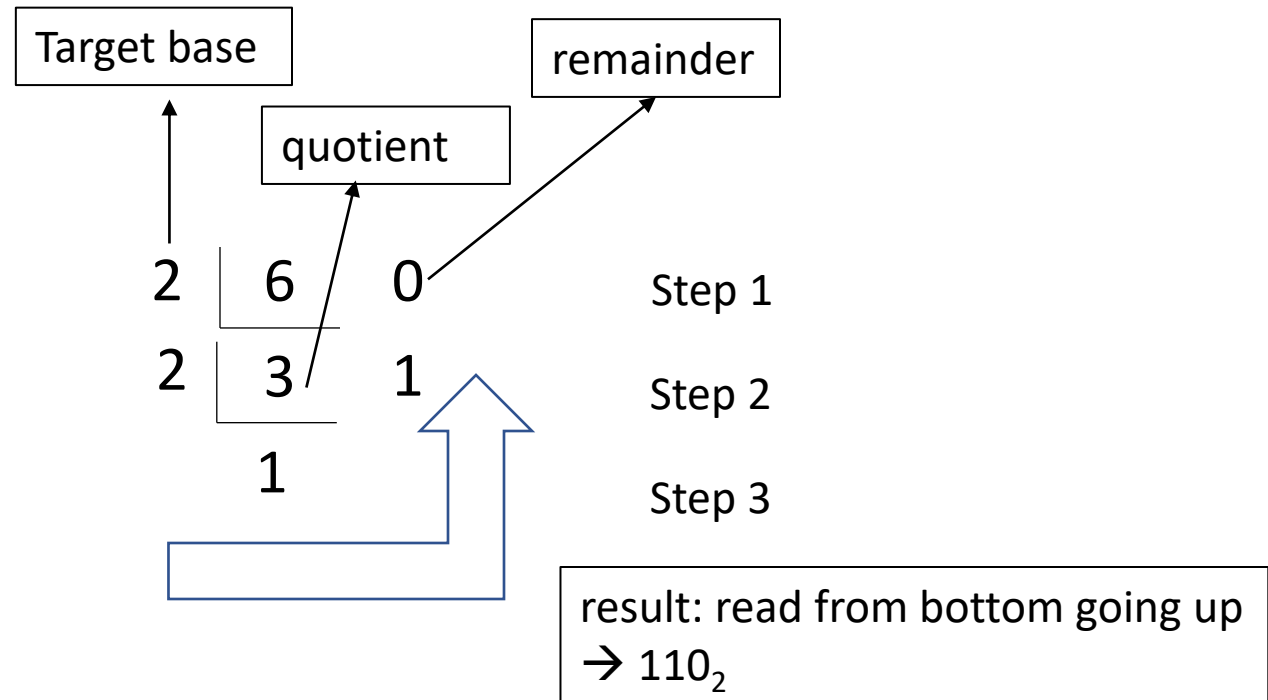

Base conversion from decimal to other number system

- How to convert a decimal number to the target number system:
- For numbers on the left side of the radix point (i.e., whole number), it is done by successively “reverse” dividing the whole decimal number by the target base.
- For numbers on the right side of the radix point (i.e., fraction number), it is done by successively multiplying the fraction decimal number by the target base.

Base conversion from decimal to other number system

Example: Convert 6 to binary

- 1.) (Step 1) For whole number, “reverse divide” 6 with the target base (e.g., 2). Write the quotient below and remainder on the side
- 2.) (step 2) Repeat while the quotient is greater than the target base
- 3.) (Step 3) Read the answer bottom up

Base conversion from decimal to other number system

Convert 0.625 to binary

1.) (Step 1) for the fractional part, multiply it with the target base (e.g., 2). Copy (to the “answer”) the digit on the left side of the radix point (0.**1**) then **zero it out** (0.250). Continue while the fractional part is not zero.

2.) (Step 2) After multiplying, copy the digit on the left side of the radix point even it is ZERO (0.**10**).

3.) (Step 3) After multiplying, the fractional part is now 0.000. Process end and the result is 0.101_2

4.) If it is non-terminating (fractional part never reaches 0), we can stop after 4 fractional places

	$\begin{array}{r} 0.625 \\ \times 2 \\ \hline \end{array}$	
0.1	$\begin{array}{r} 1.250 \\ \times 2 \\ \hline \end{array}$	Step 1
	$\begin{array}{r} 0.250 \\ \times 2 \\ \hline \end{array}$	
0.10	$\begin{array}{r} 0.500 \\ \times 2 \\ \hline \end{array}$	Step 2
	$\begin{array}{r} 0.500 \\ \times 2 \\ \hline \end{array}$	
0.101	$\begin{array}{r} 1.000 \\ \times 2 \\ \hline \end{array}$	Step 3
	$\begin{array}{r} 0.000 \\ \times 2 \\ \hline \end{array}$	

Convert 314 to hex

314 = _____₁₆

Convert 0.625 to hexadecimal

0.625 = ₁₆

For discussion ---

- NOTE that using reverse division can be a long process especially if the target base is small.
- Try converting 2052 to binary, how many reverse divisions do you have to perform?
- Are there other faster methods to convert decimal to other number system?

Base conversion between binary and octal

- Binary needs at least **3 digits** to represent 1 octal digit.
- Even though, 1 binary digit is enough to represent octal digit 0, but you need 3 bits to represent octal digit 7.

Octal	
0	000
1	001
2	010
3	011
4	100
5	101
6	110
7	111

Base conversion between binary and octal

- Binary to octal

→ starts from binary point, group every 3 binary digits and convert to its equivalent octal digit

$$011\ 101\ 001.111_2 = \underline{351.7}_8$$

Octal

0 000

1 001

2 010

3 011

4 100

5 101

6 110

7 111

Base conversion between binary and octal

- Octal to binary

→ Convert each octal digit to 3 binary digits

7 2 6 .5₈ = 111 010 110.101₂

↓ ↓ ↓ ↓

111 010 110 101

Octal

0 000

1 001

2 010

3 011

4 100

5 101

6 110

7 111

Base conversion between binary and hexadecimal

- Binary needs at least **4 digits** to represent 1 hex digit.
- Even though, 1 binary digit is enough to represent hex digit 0, but you need 4 bits to represent hex digit F.

Hexadecimal			
0	0000	8	1000
1	0001	9	1001
2	0010	A	1010
3	0011	B	1011
4	0100	C	1100
5	0101	D	1101
6	0110	E	1110
7	0111	F	1111

Base conversion between binary and hexadecimal

- Binary to hexadecimal

→ starts from binary point, group every 4 binary digits and convert to its equivalent hexadecimal digit

$$0111\ 0101\ 1001.1011_2 = \underline{759.B}_{16}$$

Hexadecimal

0	0000	8	1000
1	0001	9	1001
2	0010	A	1010
3	0011	B	1011
4	0100	C	1100
5	0101	D	1101
6	0110	E	1110
7	0111	F	1111

Base conversion between binary and hexadecimal

- Hexadecimal to binary
→ Convert each hex digit to 4 binary digits

8 2 9 $.A_{16} = \underline{1000\ 0010\ 1001.1010}_2$

↓ ↓ ↓ ↓

1000 0010 1001 1010

Hexadecimal			
0	0000	8	1000
1	0001	9	1001
2	0010	A	1010
3	0011	B	1011
4	0100	C	1100
5	0101	D	1101
6	0110	E	1110
7	0111	F	1111

Base conversion between hexadecimal and octal

- Hexadecimal to octal

Hexadecimal \rightarrow binary \rightarrow octal

*expand 4 binary digits \rightarrow group by 3 binary digits

8	2	9	$.A_{16} = \underline{4051.50}_8$
↓	↓	↓	↓
1000	0010	1001	1010
1000	0010	1001	1010 00
4	0	5	1 .5 0

add 0s to complete 3 binary digits

Base conversion between octal and hexadecimal

- Octal to hexadecimal

Octal \rightarrow binary \rightarrow hexadecimal

*expand 3 binary digits \rightarrow group by 4 binary digits

add 0s to complete 4 binary digits

add 0s to complete 4 binary digits

- Convert CAF.E_{16} to octal

- $\text{CAF.E}_{16} = \underline{\hspace{1cm}}_8$

Base conversion between numeral systems

- x numeral system to y numeral system (example: 32.2_5 to base-7)
- x numeral system \rightarrow decimal \rightarrow y numeral system
- $32.2_5 = 17.4_{10} = 23.2541_7$

$$\begin{array}{rcl}
 32.2_5 & & \\
 \downarrow & & \\
 2 \times 5^{-1} & = & 0.4 \\
 \downarrow & & \\
 2 \times 5^0 & = & 2 \\
 \downarrow & & \\
 3 \times 5^1 & = & 15 \\
 \hline
 \text{summation:} & & 17.4
 \end{array}$$

$$\begin{array}{r}
 7 \overline{) 17} \quad 3 \\
 \underline{14} \\
 3
 \end{array}$$

2

$$\begin{array}{r}
 0.4 \\
 \times 7 \\
 \hline
 2.8 \\
 0.8 \\
 \times 7 \\
 \hline
 5.6 \\
 0.6 \\
 \times 7 \\
 \hline
 4.2 \\
 0.2 \\
 \times 7 \\
 \hline
 1.4
 \end{array}$$

0.2 0.25 0.254 0.2541

we stop at 4 fractional places

To recall...

- What we have learned:
 - ✓ Describe the process of converting from decimal to other number system
 - ✓ Describe the process of converting special cases involving binary, octal and hexadecimal
 - ✓ Describe the process of converting from one number system to another number system
